On February 3, 2004, the National Highway Traffic Safety Administration (NHTSA) published a Federal Register notice requesting comments on a frontal offset crash test requirement. In this notice (69 FR 5113), we discussed additional crash tests that the agency planned to conduct, and our plan to docket the results in Docket Number NHTSA-1998-3332, as the tests became available during the comment period of this notice. The purpose of this memorandum is to cross-reference the information, and provide notification that the last of those crash tests have been completed and docketed.

As discussed in the notice, the test configuration consisted of both vehicles moving at 56.3 km/h such that the subject vehicle impacts the left front corner of its collision partner at an offset of 50 percent and an impact angle of 30 degrees. The subject vehicles and standard collision partner are listed in Table 1. We have made electronic signal traces, avi files (video), and scanned test reports available to the public through our Internet vehicle crash test database, <http://www-nrd.nhtsa.dot.gov/database/nrd-11/asp/QueryTestTable.asp>. Table 1 lists the vehicle models and test numbers that are needed to reference the information in the NHTSA database.
